4.1. Bank has approved the following six domestic credit rating agencies accredited by RBI for mapping its exposure with domestic borrowers under standardized approach of credit risk.

- Brickwork
- CARE
- CRISIL

- ICRA
- India Ratings
- SMERA

Bank has also approved the following three international credit rating agencies accredited by RBI in respect of exposure with overseas borrowers.

- FITCH

Table DF-9: Interest Rate Risk in the Banking Book (IRRBB)

(i) Qualitative Disclosures:

9.1 The interest rate risk arises due to fluctuating interest rates on rate sensitive assets and liabilities. For earning perspective, Traditional Gap Analysis (TGA) and for economic value perspective, Duration Gap Analysis (DGA) is carried out to assess the interest rate risk at quarterly intervals on both trading book and banking book for domestic and overseas operations, as per RBI guidelines. As per ALM Policy, prudential limits have been fixed for impact on Net Interest Income (NII), Net Interest Margin (NIM), Duration gap and Market Value of Equity for the bank. Moreover, behavioral studies are also being done for assessing and apportioning volatile and core portion of various non-maturity products of both assets and liabilities.

Earning Approach

Since, in case of banks, interest income comprises major part of the income, a standardized rate shock analysis for upward or downward rate movement on the Gap statement is done. Accordingly, Earning at Risk (EaR) for different rate shocks is done to assess the impact on Net Interest Income (NII) of the bank due to adverse movement of rate of interest.

9.2 Economic Value Approach

The economic value approach involves analyzing the impact on the capital funds due to change in interest rate by 200 bps using Duration gap Approach. It assesses the intrinsic values of assets and liabilities from time to time thereby improving banks insight into the profile of assets and liabilities vis-a vis contractual rate and market rate. As a prudential measure, a limit has been fixed for net duration gap of the assets and liabilities and the same is monitored at regular interval.

(ii) Quantitative Disclosures:

Earning at Risk: The table reveals the impact of 0.50% adverse change in interest rate on NII as at 31.03.2017.

Change in interest rate	Estimated impact on NII due to adverse change in rate of interest up to 1 year
50 bps	Rs. 12292.70 Million.

Economic Value of Equity: The table reveals the impact on Economic Value of Equity for an assumed rate shock of 200 bps on the banking book as at 31.03.2017.

Change in Economic value of Equity	200 bps
	Rs. 21669.40 Million.

Table DF-10: General Disclosure for Exposures Related to Counterparty Credit Risk

The hedge transactions are undertaken for balance sheet management. Proper system for reporting and monitoring of risks are in place. Policy for hedging and processes for monitoring the same is in place.

Accounting policy for recording hedge and non-hedge transactions are in place, which includes recognition of income, premiums and discounts.

Valuation of outstanding contracts, provisioning, collateral and credit risk mitigation are being done

(ii) Quantitative Disclosures :

(b) Gross positive fair value of contracts, netting benefits , netted current credit exposure, collateral held (including type, e.g. cash, government securities, etc.), and net derivatives credit exposure. Also report measures for exposure at default, or exposure amount, under CEM. The notional value of credit derivative hedges, and the distribution of current credit exposure by types of credit exposure.

(c) Credit derivative transactions that create exposure to CCR (notional value), segregated between use for the institution's own credit portfolio, as well as its intermediation activities, including the distribution of the credit derivatives products used, broken down further by the protection bought and sold within each product group.

DISCLOSURE ON LIQUIDITY COVERAGE RATIO – 31.03.2017

QUALITATIVE DISCLOSURE ON LIQUIDITY COVERAGE RATIO

The bank has implemented RBI guidelines on Liquidity Coverage Ratio (LCR) from 1st January 2015.

The LCR standard aims to ensure that a bank maintains an adequate level of unencumbered High Quality Liquid Assets (HQLAs) that can be readily converted into cash at little/no loss of value to meet its liquidity needs for a 30 calendar day time horizon under a liquidity stress scenario.

LCR has two components:

- i. The value of the stock of High Quality Liquid Assets (HQLA) ÷ The Numerator.
- ii. Total Net Cash Outflows: Total expected cash outflows minus Total expected cash inflows in stress scenario for the subsequent 30 calendar days - The denominator.

Definition of LCR:

$$\frac{\text{Stock of high quality liquid assets (HQLAs)}}{\text{Total net cash outflows over the next 30 calendar days}} \times 100\%$$

The LCR requirement has become binding on the banks with the following minimum required level as per the time-line given below:

	Jan 1, 2015	Jan 1, 2016	Jan 1, 2017	Jan 1, 2018	Jan 1, 2019
Minimum LCR	60%	70%	80%	90%	100%

As at 31.03.2017, against the regulatory requirement of 80%, bank is maintaining LCR at 143.16% (average of daily observation over the previous Quarter) at consolidated level (including domestic & foreign subsidiaries).

The main drivers of LCR of the bank are High Quality Liquid Assets (HQLAs) to meet liquidity needs of the bank at all times and basic funding from retail and small business customers. The retail and small business customers contribute about 69.08% of total deposit portfolio of the bank which attracts low run-off factor of 5/10%.

Composition of High Quality Liquid Assets (HQLA)

HQLAs comprises of Level 1 and Level 2 assets. Level 2 assets are further divided into Level 2A and Level 2B assets, keeping in view their marketability.

Level-1 assets are those assets which are highly liquid. For quarter ended Mar 31, 2017, the daily observation average over the previous quarter Level-1 asset of the bank includes Cash in Hand, Excess CRR, Government Securities in excess of SLR, sovereign securities besides MSF & FALLCR and Marketable securities totalling Rs. 135969.40 cr.

Level - 2A & 2B assets are those assets which are less liquid and their weighted amount comes to Rs. 9283.52 cr. Break-up of daily observation Average HQLA during quarter ended Mar 31, 2017 is given hereunder:

High Quality Liquid Assets (HQLAs)	Average % age contribution to HQLA
Level 1 Assets	
Cash in hand	1.06%
Excess CRR balance	0.31%
Government Securities in excess of minimum SLR requirement	48.18%
Government securities within the mandatory SLR requirement, to the extent allowed by RBI under MSF (presently to the extent of 2 per cent of NDTL)	7.73%
Marketable securities issued or guaranteed by foreign sovereigns having 0% risk-weight under Basel II Standardized Approach	1.52%
Facility to avail Liquidity for Liquidity Coverage Ratio i.e. FALLCR (presently to the extent of 9 per cent of NDTL)	34.81%
Total Level 1 Assets	93.61%
Total Level 2A Assets	5.77%
Total Level 2B Assets	0.62%
Total Stock of HQLAs	100.00%

Concentration of Funding Sources

This metric includes those sources of fundings, whose withdrawal could trigger liquidity risks. It aims to address the funding concentration of bank by monitoring its funding requirement from each significant counterparty and each significant product / instrument. As per RBI guidelines, a "significant counterparty/Instrument/product" is defined as a single counterparty/Instrument/product or group of connected or affiliated counter-parties accounting in aggregate for more than 1% of the bank's total liabilities.

The bank has no significant counterparty (deposits/borrowings) as on 31.03.2017. The share of largest depositor in bank's total deposits is around 0.29% whereas the contribution of top 20 depositors is around 3.29% only. The significant product / instrument includes Saving Fund, Current deposit, Core Term Deposit, and Inter-bank term deposit, the funding from which are widely spread and cannot create concentration risk for the bank.

Derivative exposure

The bank has low exposure in derivatives having negligible impact on its liquidity position.

Currency Mismatch

As per RBI guidelines, a currency is considered as "significant" if the aggregate liabilities denominated in that currency amount to 5 per cent or more of the bank's total liabilities. In our case, only USD (8.63% of bank's total liabilities) falls in this criteria whose impact on total outflows in LCR horizon can be managed easily.

Degree of centralization of liquidity management and interaction between group's units

The group entities are managing liquidity on their own. However, the bank has put in place a group-wide contingency funding plan to take care of liquidity requirement of the group as a whole in the stress period.
